

BA6183 AV Information

1. Press (about 1 second) the Crestron touchpanel to wake it up.
2. By default the in-room PC is selected, unless a laptop is connected which should take priority automatically.
3. If you are connecting a laptop there are two cables which are tied together for you to choose from. One cable is HDMI ↔ HDMI and the other is HDMI ↔ USB-C. An HDMI end connects on the podium and the other end is for your laptop.

Please check that you are only using one of the cables.
4. When adjusting the volume if you slide too quickly the volume will reset.
5. If you experience the “ringing problem” please let IT know. We have had an AV team in and they believe they have fixed the problem.
6. There is a projector at the front desk (BA6290) if needed.
